

# DOVETAIL CONNECTOR SERIES

## APPLICATION NOTES

- 1** Note that with the 6mm height Dovetails, the crimp to retain the plunger is exposed. Overstroking the probe past closed position could cause damage to the probe and lead to failure.

- 2** The Dovetail interlocking feature is designed to withstand normal handling and packaging. After multiple engagements of the Dovetail blocks, the retaining force of the block to block interconnect will diminish.

- 3** Exercise care when soldering wires to the solder-cup termination. Minimize heat and duration under heat during the solder processes to avoid annealing the spring. This could lead to loss of spring force, loss of stroke, or mechanical failure.
